

TURMOIL EXISTS BENEATH THE SURFACE...

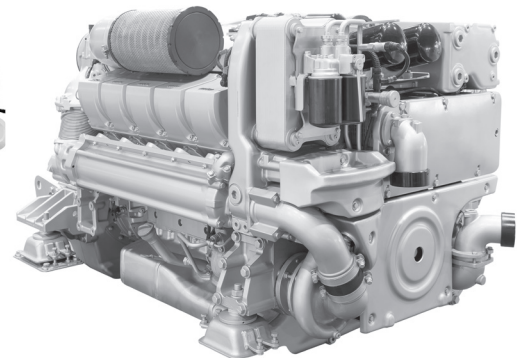

Onboard systems that use seawater for operation suffer the impacts of biofouling, hard scale buildup and corrosion.

Revolutionizing Seawater Systems for the 21st Century...

Chances are pretty good that your vessel is sporting technology from last century... and we're not referring to the 1980s or 90s...

Raw water networks were developed to remove heat from propulsion engines back in the early 1900s when coal-fired boilers were phased out in favor of the internal combustion engine... and they haven't evolved much since then.

Seawater is pulled in, pushed through equipment, and then pumped back to the sea.

Routine flushing with simple fresh water is recommended by nearly every manufacturer of both vessels and systems as the most important "preventative maintenance" procedure.

Seawater Networks that Self-Maintain

PHIBER Systems defend against scale, corrosion and more by providing routine, precision, freshwater flushing... automatically, or on demand, eliminating the hassle and inefficiencies of the manual freshwater flush.

It INTEGRATES into a vessel's existing raw water network, redefining how it operates, so that "normal operation" INCLUDES freshwater flushing as an intrinsic function. PHIBER Systems do NOT rely on you to connect a dock/garden hose because they operate in concert with the vessel's native freshwater system.

PHIBER Systems ensure optimal flushing results, every time. They are programmable and tailored to a vessel's exact needs using a revolutionary Manifold & Control to safely inject fresh water at the optimal time, purging seawater from the raw water circuit... at the touch of a button.

Other "Flushing Kits" require YOU to perform a safe and effective flush... PHIBER Systems ARE the safe and effective flush!

PHIBER

PRESSURIZED HYDRO INJECTION for BRINE EVACUATION & REMEDIATION

PHIBER Systems are compatible with most marine inboard and outboard engines, generators, vessel stabilization systems, and more...

If it uses seawater to operate, a PHIBER System can safely flush it.

**Proudly Engineered & Manufactured
in Saint Augustine, Florida USA**
