

Junction Module Kit

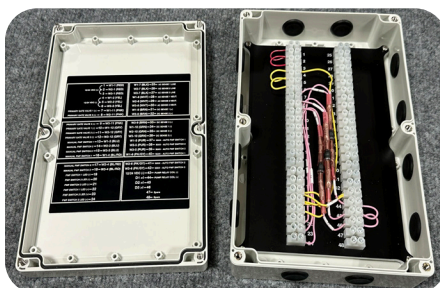

PHAST & PHRIENDLY NETWORKING

Junction Module (JM) Kits serve two critical functions:

- JM Kits streamline the installation of any PHIBER electrical network by providing labels, hardware, and methods for mounting and integrating circuits (electrical wiring), relays, FWF Switch controls, and more.
- JMs provide an environmentally protected platform that allow networking in hostile locations such as engine rooms, bilges, wet lockers and other areas that present difficult environments for electrical systems.

Features

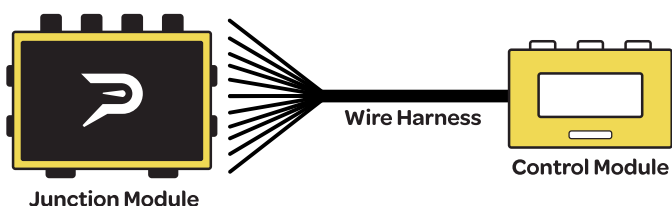

- Non-conductive, ruggedized IP65 Enclosure
- Multiple ports to support harnessing from any direction during installation
- Cord Grips for environmentally sealing wiring in/out of the enclosure
- Terminals labeled and color-coded for ease of identification/connection of circuits

Terminal strips and wiring legend placard in MJM

Functions

- "OEM" Single JM supports single Control Module with Native FWF Pump **Manual OR Man-Auto function only**
- Single JM supports single Control Module with Dedicated FWF Pump **Manual AND Man-Auto functions**
- Multi JM supports 2-3 Control Modules with a SINGLE dedicated FWF Pump **Manual AND Man-Auto functions**

Single Junction Module Kit

Item # 25-9000300

Item # 25-9000320 (OEM)

Kit Includes

- Single Junction Module
- Cord Grips
- Single Switch Plate (Horizontal)
- Single Switch Plate (Vertical)
- PHIBER Rugged Label Sheet
- Blue Sea Labels for electrical distribution panels

Multi-Junction Module Kit

Item # 25-9000310

Kit Includes

- Multi-Junction Module
- Cord Grips
- Single Switch Plate (Horizontal)
- Single Switch Plate (Vertical)
- Twin Switch Plate (Horizontal)
- Twin Switch Plate (Vertical)
- PHIBER Rugged Label Sheet
- Blue Sea Labels for electrical distribution panels

Switch Plates and labeling kits are included with the Kits

NOTE: Additional components are needed for proper installation
