

# PRESSURIZED HYDRO INJECTION BRINE EVACUATION REMEDICATION

Freshwater Maintenance...  
...performed at the touch of a button!

PHIBER Systems protect against the “tentacles” of Corrosion & Scale in marine systems that use seawater, including inboard & outboard engines, generators, vessel stabilization systems, and more.

Proudly Engineered & Manufactured at  
our ISO-9001 Certified Facility in Saint  
Augustine, Florida USA

# FRESHWATER MAINTENANCE For the 21st Century

# Revolutionizing Seawater Systems for the 21st Century

Modern Vessels are constructed with “push-button” amenities and conveniences that rival most houses built in the last 10 years... yet, when it comes to critical engine-flush maintenance, we still rely on the 100-year old technology of a garden hose... and manual labor.

The practice of Freshwater Flushing critical systems directly affects the “Quality of Life” and “Total Cost of Ownership” of our boats.

In 2025, flushing maintenance finally evolved past the garden hose... offering the “push-button” functionality & convenience we expect.

**PHIBER Systems** offer precision Freshwater Flushing (FWF) maintenance, at the touch of a button. A revolutionary Control and Freshwater Flush (FWF) Manifold eliminate the burdens of routine flushing...  
...and the garden hose!

Patent-pending, award winning PHIBER Systems are the **FIRST** and **ONLY** fully-automated, universal Freshwater Flush solution that complements ANY marine system that depends on raw water cooling. It performs a “perfect” flush using specific metrics and science, and then documents the flushing data in a historical record.

# The PHIBER System

The PHIBER System is comprised of Kits that are assembled into Systems. The core Control Module and Hydrostatic Lock execute optimal flushing under specific conditions, promoting safety, efficiency, and eco-friendly processes.

## THE CONTROL MODULE

The Control Module was developed over 3 years of testing and incorporates the experience and feedback from a wide range of marine professionals and recreational operators. It embodies both real world operating conditions and a wide range of application in its design and software. It is universally used with any PHIBER FWF Manifold.

## THE OVERBOARD FWF MANIFOLD

The PHIBER FWF Manifold is a proprietary plumbing configuration that allows safe, correct, hands-free freshwater flushing for “dry” networks such as those on Outboard Engines (single to multiple), Vessel Gyroscopic Stabilization, desalination, refrigeration and climate control systems that must be flushed while inactive and the raw water pump is off.

## FLEXIBLE FLUSHING ARCHITECTURES

The PHIBER FWF Manifold is compatible with both hands-free and manual hose-flush methods. The versatile PHLOW Hub and Dock Hose Manifold allow the operator to tailor the PHIBER System to their vessel's exact installation footprint requirements.

## ROI-FOCUSED SOLUTIONS

The PHIBER Systems provide tremendous Return on Investment and truly enhances the boat ownership experience for every customer, from recreational to commercial and institutional.
